Specialized cooking Impulse pressure pan

Serafino Zani R&D has designed a brand-new pressure cooker called IMPULSE, with the help of Ferdinand Alexander Porsche's ingeniousness.

The essential pure design, which is a characteristic of Porsche's approach to design, combines ideally with the technical skill developed by Serafino Zani through the years.

The result is a product that is unique and functional in design.

IMPULSE comes with a 5 and 7 litre capacity in three different versions:

IMPULSE STEEL®, with steel body and lid;
IMPULSE TITANIUM®, with titanium-coated body; and IMPULSE SILVER®, with borosilicate-coated body and attractive silver reflections.

The twin seal lid is laser welded to ensure absolute safe operation, and has a highly reliable locking system with a fixed locking device and a sliding device operated by the rotating handle, both patented.

IMPULSE satisfies a wide range of cooking requirements, thanks to the special valve that can be adjusted to two different pressures, purposely designed to optimize operation depending on the type of food to cook.
